InvestFlow UAT and Accessibility Report

Baseline reproduction and regression | November 2026

Scope is the standalone InvestFlow HTML prototype. The source ZIP was tested before any edits. The baseline reproduced five failures out of 16 checks. 23 of 23 checks passed in Chromium and 23 of 23 passed in Firefox.

Environment	Version and configuration
Chromium	Chromium 153.0.8010.0, 1120 x 760 desktop and touch emulation at 390 px and 320 px.
Firefox	Firefox 153.0, 1120 x 760 desktop and narrow desktop viewports at 390 px and 320 px.
Accessibility	axe-core 4.14.0 with WCAG A and AA tags through 2.2 and selected best-practice rules. Keyboard actions executed separately.

Original failures and retest evidence

ID	Observed baseline	Observed after the fix
B02	No as-of label.	Fixed date visible. Cash plus invested assets equals $48,260.50.
B04	Period values changed without a chart.	Three distinct point sets. Data endpoints match 2.73%, 5.49%, 6.93%.
B10	2-share confirmation remained after editing to 3.	Both quantity and security edits cleared confirmation and updated cost.
A03	Selection exposed visually only.	Portfolio exposed aria-current and 6M exposed aria-pressed.
A04	Saving DLTA moved focus to BODY.	Focus remained on the same DLTA button after saving.

Accessibility interpretation

No selected axe rule reported a violation on the five scanned views in either engine. The Overview gradient was incomplete in the automated scan. The separate computed sample found 7.58:1 and 5.27:1 against its lighter endpoint. Those results apply only to the sampled text and backgrounds.

Executed checks and scope

ID	Feature or check	Chromium	Firefox
B01	Primary navigation	Pass	Pass
B02	Account total and timestamp	Pass	Pass
B03	Portfolio return periods	Pass	Pass
B04	Portfolio trend by period	Pass	Pass
B05	Catalog search	Pass	Pass
B06	Watchlist add and remove	Pass	Pass
B07	Watchlist session disclosure	Pass	Pass
B08	Valid order review	Pass	Pass
B09	Quantity and buying power guards	Pass	Pass
B10	Confirmation freshness	Pass	Pass
A01	Keyboard navigation and focus	Pass	Pass
A02	Programmatic form labels	Pass	Pass
A03	Selected state semantics	Pass	Pass
A04	Focus after saving	Pass	Pass
B11	Watchlist empty state	Pass	Pass
B12	Holdings reconcile	Pass	Pass
A05	Skip link and reverse focus	Pass	Pass
A06	Focus after removing saved securities	Pass	Pass
A07	Axe WCAG A and AA rule scan	Pass	Pass
A08	Form error association	Pass	Pass
A09	Sampled Overview gradient contrast	Pass	Pass
M01	Mobile layout and order review	Pass	Pass
M02	Narrow navigation and target sizes	Pass	Pass

Coverage and decision

The Excel register includes reproduction steps, expected and observed results, severity, fixes and evidence paths. The raw browser reports record axe output and runtime errors. Screen readers, physical devices, Safari and customer sessions were not tested. Prototype walkthrough readiness is supported. Production release acceptance remains open.
